

Tennis Growth Platform

BRD • PRD • Design Brief • Technical Direction • Screen Inventory • Pitch Summary

Prepared for product planning and investor conversations

Date: 24 July 2026

Platform Area	Primary Users	Channel
Mobile App	Tennis players, learners, coaches, casual players	Flutter iOS/Android
Community/Club Admin Web App	Clubs, academies, court managers, coaches, event organizers	Next.js web app
Platform Management Dashboard	Internal operations, support, finance, content, compliance, growth team	Next.js admin dashboard
Backend/API	All products, integrations, analytics, notifications	NestJS API layer

1. Executive Summary

The proposed platform is a tennis and padel ecosystem that helps players discover courts, find opponents, join communities, read tennis news, learn through guided tips, track skill improvement, and engage with clubs and coaches. It combines match organization with learning, progress tracking, court discovery, club management, and platform-level administration.

The product will include a Flutter mobile app for players, a Next.js web app for community and club administrators, and a Next.js internal management dashboard. A NestJS backend will power authentication, users, court data, communities, bookings, news aggregation, learning content, progress tracking, notifications, subscriptions, and analytics.

Strategic Pillar	What it delivers
Play	Find opponents, join ladders/leagues, organize matches, record results.
Learn	Access beginner-friendly tennis tips, drills, lessons, and structured learning paths.
Improve	Track serving, forehand, backhand, volley, footwork, match strategy, and confidence growth.
Discover	Find tennis courts, Google Business Profile data where available, contacts, directions, coaches, events, and booking links.
Connect	Build local tennis communities around clubs, courts, academies, and events.

2. Business Requirements Document (BRD)

2.1 Business Problem

Many tennis players struggle to find nearby courts, reliable booking contacts, suitable playing partners, beginner-friendly learning resources, organized club activities, and clear ways to measure improvement. Clubs and academies also lack lightweight tools to manage community engagement, events, court visibility, coaching programs, and communication with players.

2.2 Business Goals

- Increase tennis participation by helping users find courts, players, lessons, and communities.
- Help beginners progress from casual interest to confident play through guided learning and measurable skill tracking.
- Provide clubs and academies with admin tools to manage venues, communities, events, coaches, contacts, and announcements.
- Create a scalable platform that can expand from one city to multiple markets.
- Build revenue streams through club subscriptions, premium player features, event fees, booking commissions, sponsorships, and coaching marketplace partnerships.

2.3 Target Users

User Segment	Needs	Key Value Proposition
Beginner player	Find courts, learn basics, track progress, meet friendly players	A guided path from learning to playing.
Intermediate/advanced player	Find competitive matches, track performance, join ladders and leagues	Better competition and measurable improvement.
Coach	Promote services, manage learners, assign drills, provide feedback	Digital coaching and client growth.
Club/community admin	Manage court profiles, events, members, announcements, and booking contacts	Simple community operations and visibility.

Platform admin	Control content, sources, users, clubs, roles, analytics, disputes, monetization	Safe, scalable, and manageable operations.
----------------	--	--

2.4 Scope

In Scope	Out of Scope for MVP
User registration, profile, player level, preferences	Advanced AI video stroke analysis
Court discovery map with profile cards and contact/booking links	Native booking/payment for every venue
Community/club pages and admin management	Wearable integrations
News aggregation using approved sources/RSS/APIs with redirects	Full article republication without publisher permission
Learning tips, drills, goals, progress tracking	Professional certification replacement or medical/fitness diagnosis
Internal admin dashboard and analytics	Complex ERP-style club accounting

2.5 Success Metrics

Metric	Example Target
Activation	60% of new users complete profile, skill baseline, and first court search.
Engagement	40% monthly active users log a match, practice session, or learning activity.
Court coverage	200 verified courts/profiles in first launch market.
Community adoption	50 clubs/communities onboarded in first 6-12 months.
Retention	30-day retention above 35% for users who join a community or log progress.
Revenue	Paid club/community subscription conversion from verified venues.

3. Product Requirements Document (PRD)

3.1 Product Vision

To become the operating system for everyday tennis: helping players discover where to play, who to play with, how to improve, and how to stay connected to local tennis communities.

3.2 Core Modules

Module	User Outcome	Primary Product
Authentication & Profiles	Users create tennis identities with skill level, preferences, location, and goals.	Mobile + Web
Court Finder	Users find nearby courts, view maps, contact venues, and open booking/direction links.	Mobile
Club/Community Management	Admins manage venue profiles, members, events, announcements, coaches, and booking details.	Admin Web
News Feed	Users view tennis highlights, source attribution, summaries, and links to publishers.	Mobile + Admin moderation
Learn/Tips	Users access structured beginner tips, lessons, drills, and learning plans.	Mobile + Admin content

Progress Tracker	Users track serve, forehand, backhand, volley, footwork, return, strategy, and mental game.	Mobile
Matches & Leagues	Users organize matches, submit scores, join ladders/leagues, and view standings.	Mobile + Club Admin
Internal Management	Platform team manages users, content, courts, clubs, reports, roles, billing, and analytics.	Dashboard

3.3 MVP Feature Requirements

Feature	Requirement	Priority
User onboarding	Sign up, location, preferred courts, player level, goals, availability.	Must
Court map	Show tennis courts near user with pins, profiles, ratings where available, contacts and directions.	Must
Court profile	Display court type, address, booking contact, Google link, photos, amenities, opening hours when available.	Must
News highlights	Aggregate approved RSS/API sources, summarize highlights, attribute source, redirect to original story.	Should
Learning centre	Organize tips by serve, forehand, backhand, volley, footwork, rules, strategy, fitness.	Must
Skill baseline	Capture user self-assessment and first measurements for key skills.	Must
Practice log	Allow session tracking, drill results, notes, confidence, duration, photos/videos in later phase.	Must
Goals	Set measurable goals by skill area with milestones and deadline.	Must
Community admin	Admins create club/community profile, manage members, announcements and events.	Must
Platform dashboard	Internal team manages users, clubs, courts, content, news sources, analytics and reports.	Must

3.4 Non-Functional Requirements

- Performance: mobile screens should load quickly on mid-range Android devices; map and list views should use pagination/clustering.
- Security: role-based access control, secure APIs, rate limiting, input validation, JWT/session hardening, audit logs for admin actions.
- Privacy: clear location permissions, user control over profile visibility, private skill notes, and safe data handling.
- Scalability: multi-market architecture for countries, cities, clubs, courts, and communities.
- Reliability: graceful degradation if Google/Maps/news APIs fail; cache venue metadata and news summaries.
- Accessibility: clear typography, sufficient contrast, large touch targets, screen-reader-aware components, and keyboard support on web.

4. Design Brief

4.1 Brand Direction

The interface should feel energetic, sporty, modern, trustworthy, and beginner-friendly. It should avoid intimidating competitive-only language and instead communicate growth, discovery, and community.

Design Principle	Application
Beginner-first clarity	Use simple labels such as Learn, Play, Improve, Courts, Community.

Progress visible	Make improvement feel measurable through charts, badges, goals, and encouraging insights.
Local discovery	Use maps, venue cards, distance, directions, contacts, and community signals.
Trust and safety	Clear source attribution for news, verified venue badges, role permissions, and privacy controls.
Mobile-first speed	Prioritize fast actions: find court, log practice, join community, read tip, contact venue.

4.2 Suggested Visual Language

- Color palette: ATP-inspired deep blue direction with an independent brand identity. Primary #12085B, secondary #1F2F8F, accent #2F59D9, with #D7FF3F used sparingly as a tennis-energy accent.
- Typography: modern sans-serif, clear hierarchy, strong numbers for stats and scores.
- Components: map cards, skill meters, progress charts, lesson cards, venue profiles, event cards, ranking tables, admin tables.
- Tone: supportive, practical, encouraging, and competitive only where appropriate.

5. Technical Architecture

Layer	Recommended Stack	Notes
Mobile app	Flutter	iOS and Android app for players, learners, coaches, match participants.
Web apps	Next.js	Separate web applications or separate route groups for club admins and platform dashboard.
Backend	NestJS	REST or GraphQL APIs, modular services, background jobs, authentication, integrations.
Database	PostgreSQL	Users, courts, clubs, communities, matches, content, progress, roles, audit logs.
Cache/Jobs	Redis + queue workers	News ingestion, notifications, map caching, analytics jobs.
Maps/Places	Google Maps Platform / Places API	Search courts, profiles, coordinates, opening hours, photos, phone, website where available.
News ingestion	RSS/APIs + summarization workflow	Approved source list, metadata extraction, summarization, moderation, source linking.
Notifications	FCM + email provider	Match reminders, community updates, booking reminders, goal nudges.
Storage	Object storage	Images, club photos, optional practice media, content assets.

5.1 Backend Modules

- Auth & Identity: signup, login, password reset, social login, roles, permissions.
- Users & Profiles: player profile, skill level, preferences, location, privacy settings.
- Courts & Venues: court records, Google Places metadata, amenities, contacts, verification status.
- Communities & Clubs: members, roles, announcements, events, coaches, court profiles.
- Matches & Leagues: invitations, scheduling, scores, standings, disputes, availability.
- Learning Content: categories, tips, lessons, drills, levels, media, completion tracking.
- Progress: skill baseline, practice logs, goals, milestones, assessment history, charts.
- News: sources, ingestion jobs, summaries, topics, publisher redirects, moderation.
- Notifications: push/email templates, reminders, preferences, delivery logs.

- Admin & Audit: dashboards, reports, content moderation, user moderation, audit trails.

7. Key Data Entities

Entity	Description
User	Profile, role, location preferences, player level, privacy settings.
SkillProfile	Ratings and baseline values for serve, forehand, backhand, volley, footwork, return, strategy.
PracticeSession	Logged training session, drills, results, notes, confidence, duration.
Goal	Skill-specific target, baseline, target value, deadline, milestones.
Court/Venue	Location, contacts, Google Places data, amenities, status, booking links.
Club/Community	Venue-linked or independent tennis community with admins and members.
Match	Players, schedule, score, confirmation, reflections, dispute state.
League/Ladder	Competition structure, members, fixtures, standings, rules.
LearningContent	Tips, lessons, drills, skill categories, levels, media.
NewsStory	Source, headline, summary, topics, image, publisher URL, moderation status.

8. Investor Pitch Summary

Pitch Area	Summary
Problem	Tennis participation is blocked by court discovery friction, weak community coordination, lack of structured beginner support, and no simple progress tracking.
Solution	A mobile-first tennis ecosystem connecting players to courts, clubs, learning, progress tracking, news, events, coaches, and matches.
Market Opportunity	Start with tennis communities in launch cities, then expand by city, club networks, academies, schools, resorts, and national tennis bodies.
Product Advantage	Combines court discovery, community management, learning, and measurable player development in one platform.
Business Model	Club subscriptions, premium player plans, coaching marketplace fees, booking commissions, events, sponsorships, and targeted tennis promotions.
Go-to-Market	Pilot with selected clubs and courts, onboard coaches, run beginner challenges, launch city-based communities, and use tournaments/events to drive adoption.
Moat	Venue database, local communities, player progress data, club relationships, content library, and network effects between players, courts, coaches and clubs.

9. MVP Delivery Roadmap

Phase	Duration	Key Deliverables
Discovery & UX	2-4 weeks	User research, information architecture, wireframes, design system foundations, screen flows.
MVP Build	8-12 weeks	Mobile app, backend APIs, court discovery, learning, progress, club admin, platform dashboard basics.

Pilot	4-6 weeks	Onboard first venues/clubs, validate court data, collect feedback, refine onboarding and progress tracking.
Commercial Launch	6-8 weeks	Subscriptions, public marketing site, reporting, improved analytics, operations playbooks.
Expansion	Ongoing	Native booking, coach marketplace, advanced leagues, video progress, payments, partnerships.

10. Competitive Reference Review — Scala Screens

Reference set: **129 Scala mobile screenshots supplied by the product team.** The screenshots are used as functional and UX references only. The proposed product should not reproduce Scala's visual design, copy, or proprietary assets. The review informs requirements, edge cases, information architecture, and opportunities for differentiation.

10.1 Reference Capabilities Observed

- Authentication using email/OTP and onboarding
- Player profile setup: city, club/association, playing hand and self-rated level
- Play/home area with upcoming activity and recommendations
- Player discovery, profiles, connections and pending requests
- Direct messaging, season/group communication and system-generated match messages
- Flex leagues, seasons, rounds, registration, waitlists and player lists
- Standings, schedules, results, match detail, walkovers and season completion
- Singles/doubles ratings, match history, statistics and achievements
- Rules, scoring formats, help/FAQ, notifications and account settings
- Event discovery, event detail, organizer information and registration states

10.2 Product Opportunities Identified

- Make scheduling structured: Propose Time, Suggest Court, Book Court, Confirm, Reschedule and Cancel actions inside the match/chat flow.
- Separate official Announcements from conversational Community Chat.
- Use explicit labels for Standings, Results, Schedule and Details instead of relying on icon-only navigation.
- Define competition states centrally: Draft, Registration Open, Enrolled, Active, Completed, Cancelled; and match states: Proposed, Scheduled, Played, Walkover, Retirement, No-show, Disputed, Cancelled, Expired.
- Treat competitive rating and skill development as separate concepts: an overall rating answers “how competitive am I?” while Serve/Forehand/Backhand/Volley/Return/Movement/Match Play answer “where am I improving?”
- Improve location relevance and privacy: use preferred areas/courts, distance filters and approximate public location rather than precise player location.
- Connect player discovery to availability, preferred courts, level, singles/doubles preference and casual/competitive intent.
- Resolve end-of-season edge cases explicitly when matches remain unplayed.
- Use consistent registration language and status feedback across events, leagues and waitlists.
- Extend the ecosystem beyond competition with court discovery/booking, learning, progress tracking, coaches and tennis news.

← What is a Flex League?

Ladder Flex League:

- **League Structure:** Flex Ladders typically run for 2-3 months. The best part? You don't need to be available for the entire period! Whether you're busy with work or planning a vacation, you can still arrange your matches around your schedule.
- **Ladder Levels:** You'll be initially placed in the ladder based on your playing ability using a combination of previous match results and in-app rating.
- **2-Week Rounds:** Every 2 weeks, you are automatically matched to 1 or 2 opponent(s) close to you in the ladder (depending on your preference).
- **Flexible Scheduling:** The app will suggest an initial match date/time (these dates are tentative!). Once you chat with your opponents in the app, you can confirm a time that works best for everyone. Court fees are shared unless a player agrees to take on the costs.
- **Convenient Match Management:** Easily arrange matches with your opponents and record your match results directly in the app.
- **Moving up the ladder:** You move up the ladder if you beat a higher-ranked opponent.

11. User Journey & Experience Flows

The proposed journey connects competition, community, courts, learning, news and measurable player development into a recurring engagement loop.

Figure 1. Proposed end-to-end player journey.

11.1 Primary Player Journey

1. Discover the platform and register
2. Verify account and complete privacy/consent choices
3. Set player profile, city/area, club and playing preferences
4. Complete competitive level and skill-development baseline
5. Land on a personalized Home showing the next best action
6. Discover players, competitions, courts, coaches, learning or news
7. Connect/message an opponent or enroll in a league/event
8. Propose a time and court; use booking/contact options where available
9. Play the match and record the result
10. Confirm/verify the result and update standings/rating

11. Log practice and update skill progress/goals
12. Receive recommendations for the next opponent, drill, court, event or learning item
13. Repeat the play-learn-improve loop

11.2 Competition Journey

- Browse league/tournament/event → view rules, dates, level and organizer
- Register / join waitlist → confirmation → enrollment status
- Season starts → round/opponents generated → official announcement
- Contact opponent → propose availability → choose court → confirm match
- Reminder → play → enter score/outcome → opponent confirmation or dispute
- Standings/rating update → next round → season completion → awards/history

11.3 Court Discovery & Booking Journey

- Open Courts → map/list based on approximate location
- Filter by distance, surface, indoor/outdoor, lights, accessibility, price, coaching and availability
- Open venue profile → Google Business data where licensed/available, amenities, photos, opening hours and contact details
- Choose booking route: call, WhatsApp, external booking URL or native booking for partner venues
- Confirm booking → add to match → notify opponent → calendar/reminder
- After visit: save venue, report incorrect data or leave platform-native feedback where supported

11.4 Learning & Skill Growth Journey

- Baseline assessment → choose goals
- Recommended learning path by level and target skill
- Complete tip/video/drill → log practice result
- Optional coach assessment / match reflection
- Skill trend updates for Serve, Forehand, Backhand, Volley, Return, Movement and Match Play
- Next recommendation generated from goals, practice and match history

11.5 News Journey

- Personalized news feed from approved sources
- Headline + source + image/metadata + short platform-generated highlight
- Follow players/tournaments/topics; save/share stories
- Read full story via publisher link/in-app browser when permitted
- Use RSS/APIs/licensed feeds where possible; do not republish full articles without rights

12. Updated Product Information Architecture

Mobile App — Flutter

- Home
- Compete: Matches, Leagues, Tournaments, Events, Rankings
- Discover: Players, Courts, Clubs, Coaches, News
- Learn: Paths, Skills, Drills, Saved
- Progress: Skill Profile, Goals, Practice Log, Assessments, Reports
- Community: Connections, Direct Messages, Groups, Announcements
- Notifications
- Profile & Settings

Club/Community Web — Next.js

- Overview
- Members & Roles
- Leagues / Seasons / Rounds
- Tournaments & Events
- Fixtures / Results / Disputes
- Standings & Ratings
- Courts / Venues / Booking Links
- Coaches
- Announcements & Communications

14. Brand & Design System Update

Visual direction: premium professional tennis, inspired by the confidence and deep-blue feel of ATP interfaces while remaining visually independent and original.

Token	Value	Usage
Primary Blue	#12085B	Primary navigation, headers, primary actions, active states
Secondary Blue	#1F2F8F	Secondary surfaces and interaction states
Accent Blue	#2F59D9	Links, charts, progress and interactive highlights
Tennis Accent	#D7FF3F	Sparingly for live states, achievements and priority highlights
Background	#FFFFFF / #F5F7FB	Primary and secondary surfaces
Text	#111827 / #6B7280	Primary and secondary text
Border	#E5E7EB	Dividers, outlines and neutral controls

- Primary typeface: Inter; alternatives Manrope, Plus Jakarta Sans or IBM Plex Sans.
- 8px spacing system; 12–16px typical card/control radii; restrained shadows and gradients.
- Reusable tokens/components shared conceptually across Flutter and Next.js implementations.
- WCAG 2.2 AA target, including contrast, focus states, keyboard support on web and adequate touch targets.
- Professional tennis imagery and motion used to communicate movement, progression and competition without visual clutter.

Product Scope Update: Tennis + Padel

The platform will launch as a multi-sport racket-sports ecosystem supporting Tennis and Padel. A member may participate in Tennis, Padel, or both while maintaining one account and one platform identity. Sport-specific ratings, assessments, match histories, statistics, competitions, learning content, preferences, achievements and development profiles remain separate.

Sport-Aware Product Model

- User Account: identity, authentication, communication preferences and platform-wide settings.
- Sport Profile: one profile per enabled sport (Tennis and/or Padel).
- Sport Rating: competitive strength derived increasingly from verified match results.
- Development Profile: technique and development measures specific to the selected sport.
- Sport Preferences: formats, competitive/social preference, availability, preferred clubs/courts and goals.

Adaptive Onboarding & Initial Level Assessment

Onboarding must do more than collect registration data. It should establish a credible starting level, understand the player's goals and preferences, and generate useful first recommendations. The Scala reference screens inform the concept of guided level estimation, but the implementation and wording must be original.

Welcome → Create Account → Verify Email / Phone → Basic Profile → Choose Sport(s) → Tennis Assessment and/or Padel Assessment → Playing Experience → Adaptive Skill Questions → Playing Preferences → Goals → Location → Club / Preferred Courts → Availability → Initial Level Calculation → Review Suggested Level → Confirm / Adjust Level → Personalised Player Profile → Recommended Next Actions → Home

Sport Selection

Question: What do you play?

- Tennis
- Padel
- Both

Selecting Both triggers separate assessments. Users can add another sport later without recreating their account.

Shared Experience Questions

Playing experience: New; <6 months; 6–12 months; 1–2 years; 2–5 years; 5+ years; competitive/advanced.

Frequency: Rarely; a few times/month; weekly; 2–3 times/week; 4+ times/week.

Competition experience: Never; social; club; local; regional; national; elite/professional.

Existing rating: Capture recognised rating system and value where available; retain as a signal, not unquestioned truth.

Tennis Assessment Dimensions

- Forehand
- Backhand
- Serve
- Return
- Volley / Net Play
- Movement / Footwork

- Match Play / Tactical Awareness

Padel Assessment Dimensions

- Rally consistency
- Forehand
- Backhand
- Serve
- Return
- Volley
- Overhead
- Bandeja
- Vibora
- Smash
- Wall usage
- Double-wall situations
- Positioning
- Net control
- Transition
- Partner communication
- Defensive play
- Shot selection
- Tactical awareness
- Match experience

Adaptive Question Logic

The assessment must branch dynamically. Beginners receive a shorter, plain-language assessment; experienced players receive deeper questions that distinguish intermediate, advanced and competitive ability. Advanced Padel techniques such as bandeja or vibora should not be asked of users whose earlier answers indicate beginner status.

Prefer behavioural questions over arbitrary 1–10 self-ratings. Example: "When rallying from the baseline, what usually happens?" Answers should progress from difficulty keeping the ball in play through controlled rallies, direction/depth, variation, attack and execution under pressure.

Assessment Result & Rating Model

At completion, show a suggested starting level with a short explanation and a skill breakdown. Allow the player to confirm or adjust the suggested level. Store System Suggested Level and User Selected Level separately.

Competitive Rating and Skill Development are separate concepts. Competitive Rating answers how strong the player is relative to others; Development Profile shows which parts of the player's game are improving.

Development Profiles

Tennis development profile:

- Serve
- Forehand
- Backhand
- Return
- Net Play
- Movement

- Match Play

Padel development profile:

- Serve/Return
- Groundstrokes
- Volley
- Overheads
- Walls
- Positioning
- Net Control
- Transitions
- Partner Play
- Tactics

Goals & Preferences

- Learn the sport
- Improve technique
- Get fitter
- Play socially
- Meet players
- Play more regularly
- Improve rating
- Join leagues
- Play tournaments
- Find coaching
- Track improvement

Tennis preferences include Singles, Doubles or Both. Padel preferences include social/competitive preference, preferred side where relevant and partner preferences. Both sports capture preferred playing times and availability.

Post-Onboarding Personalisation

Do not land a new member on an empty dashboard. Generate sport-aware next actions such as Find Players, Find Courts, Join a League, Start Training, Set a Goal, Find a Coach, or Play a First Match based on sport, level, goals, location and availability.

Design System Implications

The design system remains shared across the ecosystem, with #1C91D0 as the primary brand colour. Sport context should be communicated through labels, iconography, content and imagery rather than creating unrelated visual systems.

Primary brand colour: #1C91D0

- Create sport-aware components such as Sport Switcher, Sport Profile Card, Rating Card, Skill Assessment Question, Skill Breakdown and Sport Badge.
- All shared components must support Tennis and Padel content without hard-coded tennis terminology.
- Navigation and filters should expose the active sport where context could otherwise be ambiguous.
- Admin competition setup must require sport selection and expose sport-specific rules/formats.

Revised Core User Journey

Discover → Register → Choose Tennis / Padel / Both → Create Sport Profile → Adaptive Level Assessment → Set Goals & Preferences → Location / Clubs / Courts → Suggested Level → Confirm → Personalised Home → Find Player / Competition / Court → Connect → Schedule → Play → Record Result → Update Rating & Stats → Reflect on Skills → Practice / Learn → Track Progress → Find Next Match → Repeat
