

TENNIS PLATFORM

Master Project Phases & AI Prompts

Planning → Design System → UX → Build → Launch

Primary product	Tennis
Secondary expansion	Padel
Mobile	Flutter
Web	Next.js
Backend/API	NestJS

Primary brand colour: #1C91D0

How to Use This Document

This document breaks the project into sequential phases. Each phase contains an objective, expected outputs, completion gate, and a ready-to-use AI prompt. Run the phases in order. Do not ask the implementation tool to jump ahead if the previous phase has not been reviewed.

- Treat Tennis as the default product context. Padel is a secondary capability, not an equal top-level mode.
- Do not add a global sport switcher. Padel is added from Profile → My Sports → + Add Padel.
- Use Scala Sports only as a functional and UX reference. Do not copy its interface, branding, or proprietary wording.
- Use #1C91D0 as the primary brand colour and keep neutral surfaces dominant.
- Keep the backend extensible enough for Padel without making the frontend feel like a generic multi-sport product.

Recommended Delivery Sequence

1. Phase 0 — Project Foundation
2. Phase 1 — Product Strategy & Requirements
3. Phase 2 — Information Architecture & User Journeys
4. Phase 3 — Design System Foundation
5. Phase 4 — Authentication & Adaptive Tennis Onboarding
6. Phase 5 — Home & Personalisation
7. Phase 6 — Player Discovery, Profiles & Connections
8. Phase 7 — Match Challenge, Scheduling & Messaging
9. Phase 8 — Match Scoring, Results, Ratings & Statistics
10. Phase 9 — Competition Engine: Leagues, Seasons, Rounds & Standings
11. Phase 10 — Courts, Clubs & Booking Discovery
12. Phase 11 — Learning, Skills, Practice & Progress
13. Phase 12 — Tennis News & Content
14. Phase 13 — Club / Community Admin Web App
15. Phase 14 — Platform Admin Dashboard
16. Phase 15 — Padel Expansion
17. Phase 16 — Payments, Subscriptions & Monetisation
18. Phase 17 — Analytics, Moderation, Privacy & Notifications
19. Phase 18 — QA, Accessibility, Performance & Security
20. Phase 19 — Beta, Launch & Post-Launch Optimisation

Shared Context to Carry Into Every Phase

Reusable Project Context

PROJECT CONTEXT

This is a TENNIS-FIRST platform.

Tennis is the primary identity, onboarding experience, product language, content focus, competition model and MVP priority.

Padel is a secondary supported sport and expansion. There is NO global sport switcher.

Padel is added contextually through:

Profile → My Sports → + Add Padel

Technology:

- Flutter: player mobile app
- Next.js: Club/Community Admin web app
- Next.js: Platform Admin dashboard
- NestJS: backend/API

Primary colour:

#1C91D0

Reference:

Scala Sports screenshots may be used as competitive UX references for concepts such as onboarding, level selection, player discovery, connections, messaging, leagues, seasons, rounds, fixtures, results, standings, waitlists, notifications and match history.

Do not clone Scala's UI, branding, layout or proprietary wording.

Product pillars:

PLAY

COMPETE

DISCOVER

IMPROVE

FOLLOW

CONNECT

Core player loop:

Onboard → Establish level → Find player/competition/court → Connect → Schedule → Play → Record result → Update rating/stats → Reflect → Improve → Play again.

Design principle:

Plan journeys and systems before screens. Reuse design-system components. Build accessible, responsive, production-ready interfaces rather than disconnected mock screens.

Phase 0 — Project Foundation

Objective: Establish a single approved product foundation before any production UI or code work.

Expected Outputs

- Product vision and positioning
- Tennis-first product principles
- Primary personas and jobs-to-be-done
- Feature architecture
- High-level domain model
- Mobile, Club Admin and Platform Admin boundaries
- P0/P1/P2 feature prioritisation
- Risks, dependencies and assumptions

Completion Gate

Do not proceed until the product architecture, core journeys, and MVP priorities are internally coherent.

AI Prompt

Using the shared project context, create the full Project Foundation.

Do not build production screens or application code.

Deliver:

1. Product vision
2. Product positioning
3. Target users and personas
4. Jobs-to-be-done
5. Product pillars
6. Feature map
7. Tennis-first product architecture
8. High-level domain model
9. Mobile app scope
10. Club/Community Admin scope
11. Platform Admin scope
12. NestJS backend capability map
13. P0/P1/P2 priorities
14. Dependencies and risks
15. Recommended implementation sequence

Explicitly preserve Tennis as the default product context and Padel as a secondary expansion.

STOP after delivering the foundation and wait for review.

Phase 1 — Product Strategy & Requirements

Objective: Turn the approved foundation into detailed functional and non-functional requirements that can guide design and engineering.

Expected Outputs

- BRD/PRD refinement
- Functional requirements by module
- Non-functional requirements
- Roles and permissions
- Business rules
- Competition rules and state models
- Acceptance criteria
- Edge/error/empty-state catalogue

Completion Gate

Requirements should be specific enough that designers and developers do not need to invent critical business logic.

AI Prompt

Convert the approved foundation into detailed product requirements.

For every major module define:

- Problem
- User
- User story
- Functional requirements
- Business rules
- Permissions
- Data required
- States
- Edge cases
- Empty states
- Error states
- Acceptance criteria

Cover:

Authentication
Onboarding
Adaptive assessment
Home
Players
Connections
Matches
Messaging
Ratings
Statistics
Leagues
Seasons
Rounds
Fixtures

Standings
Tournaments
Courts
Clubs
Coaches
Learning
Progress
News
Notifications
Profile
Settings

Also define non-functional requirements for accessibility, privacy, performance, security, scalability, localisation, observability and reliability.

Do not produce UI code.

Phase 2 — Information Architecture & User Journeys

Objective: Define how users move through the product and how information is organised before screen design begins.

Expected Outputs

- Complete information architecture
- Mobile navigation model
- Club Admin navigation
- Platform Admin navigation
- Primary and secondary journey maps
- Decision points and states
- Complete screen inventory

Completion Gate

Every major user goal must have a clear start, path, success state, and recovery path.

AI Prompt

Create the complete information architecture and user journey system.

For the mobile app, evaluate:

Home

Play

Compete

Discover

Profile

Do not add a global sport switcher.

Create detailed journeys for:

- Registration
- Adaptive Tennis onboarding
- Player discovery
- Connection request
- Match challenge
- Match scheduling
- Court selection
- Result submission
- Result dispute
- League registration
- League participation
- Tournament participation
- Court discovery and booking
- Coach discovery
- Learning
- Practice logging
- Skill development
- News
- Notifications
- Add Padel

For each journey show:

Entry → user action → decision → system response → success/failure → next action.

Then produce the complete screen inventory for:

1. Flutter mobile
2. Club/Community Admin
3. Platform Admin

Do not design high-fidelity screens yet.

Phase 3 — Design System Foundation

Objective: Build the visual and interaction language that all subsequent screens must use.

Expected Outputs

- Brand tokens
- Colour system
- Typography
- Spacing and layout
- Radius, borders and elevation
- Iconography and motion
- Core components
- Tennis-specific components
- States and accessibility rules
- Flutter/Next.js token mapping

Completion Gate

No product screen should be designed until the foundational components and tokens are documented.

AI Prompt

Build the complete design-system foundation.

Primary colour:

#1C91D0

Supporting colours:

Primary Dark #126A9B

Primary Light #E8F5FC

Background #F7FAFC

Surface #FFFFFF

Primary Text #111827

Secondary Text #6B7280

Border #E5E7EB

Success #16A34A

Warning #F59E0B

Error #DC2626

Use Inter as the primary UI typeface.

Use an 8px spacing system.

Target WCAG 2.2 AA.

Define:

- Semantic design tokens
- Typography scale
- Spacing
- Radius
- Borders
- Elevation
- Motion
- Breakpoints
- Icon principles

- Grid/layout rules

Define reusable components and all relevant states:

Buttons

Inputs

Search

Filters

Tabs

Cards

Navigation

Dialogs

Bottom sheets

Tables

Charts

Notifications

Chat

Map pins

Player cards

Match cards

League cards

Standings

Court cards

Coach cards

Skill cards

Progress components

Assessment components

Do NOT create a Sport Switcher component.

Map design tokens to Flutter ThemeData/Theme Extensions and CSS variables / Next.js theme conventions.

STOP before product-screen implementation.

Phase 4 — Authentication & Adaptive Tennis Onboarding

Objective: Design and implement the first major mobile journey: registration through personalised Tennis profile creation.

Expected Outputs

- Authentication flow
- Verification
- Basic profile
- Adaptive experience assessment
- Adaptive Tennis skill assessment
- Level calculation/review
- Goals/preferences/location/availability
- Personalised completion state

Completion Gate

A new user should finish onboarding with a credible starting level and meaningful next actions.

AI Prompt

Design and implement the Flutter Authentication + Adaptive Tennis Onboarding experience using the approved design system.

Flow:

Welcome

→ Register/Login

→ Verify

→ Basic Profile

→ Tennis Experience

→ Adaptive Tennis Assessment

→ Playing Preferences

→ Goals

→ Location

→ Club / Preferred Courts

→ Availability

→ Suggested Level

→ Confirm / Adjust

→ Tennis Profile Created

→ Personalised Next Actions

Assessment must be adaptive, not a fixed questionnaire.

Prefer behavioural questions over 1–10 self-ratings.

Assess:

Forehand

Backhand

Serve

Return

Net Play

Movement

Match Play

Store System Suggested Level and User Selected Level separately.

Include:

Loading

Validation

Back/continue logic

Skip logic where appropriate

Interrupted onboarding recovery

Empty/error states

Accessibility

During onboarding, optionally ask:

"Do you also play Padel?"

Yes / No / I'd like to learn

Do not interrupt the Tennis-first journey.

Do not add a global sport switcher.

Phase 5 — Home & Personalisation

Objective: Create a dynamic Home experience that tells the player what to do next.

Expected Outputs

- Personalised home
- Next action logic
- Upcoming match cards
- League/round cards
- Suggested players
- Nearby courts
- Training recommendations
- Progress and news modules

Completion Gate

Home should prioritise actionable relevance rather than becoming a generic dashboard.

AI Prompt

Design and implement the Flutter Home experience.

Home must answer:

"What should I do next?"

Prioritise dynamically:

1. Urgent actions
2. Upcoming matches
3. Current league/round actions
4. Suggested opponents
5. Nearby courts
6. Development recommendations
7. Progress
8. Tennis news/community updates

Create clear priority logic and states for:

New user

Active league player

Player with upcoming match

Player with unconfirmed result

Inactive player

Beginner

Competitive player

Avoid a static grid of disconnected cards.

Use the approved design system and #1C91D0 appropriately without overusing blue.

Phase 6 — Player Discovery, Profiles & Connections

Objective: Enable users to discover suitable opponents, evaluate profiles, and build a player network.

Expected Outputs

- Player search/discovery
- Filters
- Player profile
- Connection request flow
- Connections management
- Privacy controls

Completion Gate

A user should be able to find a relevant player and understand whether they are a good match without exposing sensitive information.

AI Prompt

Design and implement Player Discovery, Player Profiles and Connections.

Discovery filters:

- General location/distance
- Rating/level
- Availability
- Singles/Doubles/Both
- Social/Competitive/Both
- Club
- Preferred courts

Player profile may include:

Photo
Name
General location
Club
Playing hand
Singles rating
Doubles rating
Overall rating
Statistics
Recent form
Match history
Achievements
Connections
Availability summary
Development areas

Implement:

Connect
Accept
Decline
Pending
Remove connection

Block
Report

Do not expose precise location, private contact details or full availability publicly.

Use Scala as a functional reference only, not a UI template.

Phase 7 — Match Challenge, Scheduling & Messaging

Objective: Turn player discovery into an actual scheduled match using structured workflows rather than chat alone.

Expected Outputs

- Challenge flow
- Structured scheduling
- Court suggestion
- Accept/counter-propose
- Confirmation
- Reschedule/cancel
- Direct messaging
- System messages

Completion Gate

Two players should be able to get from challenge to confirmed match with minimal ambiguity.

AI Prompt

Design and implement Match Challenge, Scheduling and Messaging.

Do not rely entirely on free-form chat.

Structured actions:

Challenge Player

Propose Date/Time

Counter-propose

Suggest Court

Accept

Confirm

Reschedule

Cancel

Book Court / Open Booking

Enter Result

Chat should support:

Direct messages

System-generated match events

Quick actions

Unread state

Attachments only if justified

Report/block controls

Define match scheduling states:

Proposed

Scheduling

Scheduled

Rescheduled

Cancelled

Expired

Design both happy paths and conflict/edge cases.

Phase 8 — Match Scoring, Results, Ratings & Statistics

Objective: Create the post-match loop that records results and turns play into trusted ratings and progress.

Expected Outputs

- Score entry
- Result review/confirmation
- Disputes
- Match history
- Statistics
- Ratings
- Recent form
- Post-match reflection

Completion Gate

Results must be trustworthy, auditable and reflected correctly in ratings, stats and competitions.

AI Prompt

Design and implement Match Results and Statistics.

Flow:

Play Match

→ Enter Score

→ Submit

→ Opponent Reviews

→ Confirm OR Dispute

→ Finalise

→ Update Rating/Stats/Standings

→ Optional Skill Reflection

Support:

Completed

Walkover

Retired

Cancelled

Disputed

Define scoring models for singles and doubles.

Display:

Set scores

Winner

Competition context

Date/time

Court

Opponent

Rating movement where appropriate

Recent form

Win/loss record

Match history

Keep Competitive Rating separate from Skill Development.

Create dispute handling states and clear audit data.

Phase 9 — Competition Engine: Leagues, Seasons, Rounds & Standings

Objective: Build the structured competition system underlying leagues, seasons, fixtures and standings.

Expected Outputs

- League discovery
- Registration and waitlist
- Season enrolment
- Rounds
- Fixtures
- Standings
- Rules
- Announcements
- Competition states

Completion Gate

The competition engine must work consistently even when matches are delayed, unfinished, disputed or walkovers.

AI Prompt

Design and implement the Tennis competition engine and mobile experience.

Support:

Leagues

Flex leagues

Seasons

Rounds

Fixtures

Results

Standings

Registrations

Waitlists

Withdrawals

Rules

Announcements

Walkovers

Retirements

Disputes

Competition states:

Draft

Registration Open

Registration Closed

Scheduled

Active

Completed

Cancelled

Player experience:

Discover League

→ View Details

→ Rules

→ Season

→ Registered Players

→ Register / Waitlist

→ Enrolled

→ Round

→ Opponents

→ Schedule

→ Play

→ Result

→ Standings

→ Next Round

Define how unfinished matches are treated when a round or season closes.

Use clearly labelled tabs/actions rather than ambiguous icon-only navigation.

Phase 10 — Courts, Clubs & Booking Discovery

Objective: Help players find where to play and move from discovery to booking/contact.

Expected Outputs

- Map/list discovery
- Filters
- Court profile
- Club profile
- Google Business enrichment where permitted
- Booking/contact actions
- Directions

Completion Gate

Users should be able to identify a suitable nearby Tennis court and understand exactly how to book or contact it.

AI Prompt

Design and implement Court and Club Discovery.

Mobile experience:

Map View

List View

Search

Filters

Court Profile

Club Profile

Directions

Call/Contact

External Booking

Native Booking placeholder if not yet integrated

Filters:

Distance

Surface

Indoor/Outdoor

Lighting

Public/Private

Club/Public facility

Amenities

Booking availability where known

Court profile:

Name

General location/address

Map

Photos where permitted

Court count

Surface

Indoor/outdoor

Lighting

Amenities

Opening hours

Phone

Website

Directions

Booking information

Club relationship

Where available and permitted, enrich with Google Business information.

Never fabricate availability or booking capability.

Phase 11 — Learning, Skills, Practice & Progress

Objective: Build the player-development engine that gives users value between matches.

Expected Outputs

- Skill profile
- Lessons
- Drills
- Goals
- Practice logging
- Progress tracking
- Recommendations
- Coach feedback readiness

Completion Gate

Players should understand what to improve, what to practise next, and whether they are actually progressing.

AI Prompt

Design and implement Tennis Learning and Development.

Separate Competitive Rating from Development Profile.

Development dimensions:

Serve

Forehand

Backhand

Return

Net Play

Movement

Match Play

Create:

Skill Profile

Skill Detail

Goals

Lessons

Drills

Training Plans

Practice Log

Progress History

Recommendations

Streaks/achievements where useful

Practice logging should remain lightweight.

Use onboarding assessment, practice, match reflection and future coach feedback as development inputs.

Recommendations should connect:

Weakness/Goal → Relevant Drill/Lesson → Practice → Progress update.

Do not present development percentages as scientifically precise unless the underlying data supports them.

Phase 12 — Tennis News & Content

Objective: Create a trustworthy content layer that keeps users engaged with Tennis without misusing publisher content.

Expected Outputs

- News feed
- Categories
- Highlights
- Source attribution
- Saved stories
- Topic following
- Admin source moderation

Completion Gate

News must clearly preserve publisher attribution and link users to original content.

AI Prompt

Design the Tennis News experience and its content model.

Categories:

Latest

Professional Tennis

Players

Tournaments

Local

Africa

Clubs

Community

Story card:

Headline

Publisher

Image where permitted

Short highlight

Publication date

Category

Original source

Actions:

Read Highlight

Open Source

Save

Share

Follow Topic

Prefer APIs, RSS, licensed sources or permitted metadata rather than uncontrolled scraping.

Do not republish full third-party articles as our own.

Define source ingestion, moderation, deduplication and broken-link handling requirements.

Phase 13 — Club / Community Admin Web App

Objective: Give clubs and community organisers the operational tools to manage players, competitions, courts and communications.

Expected Outputs

- Admin navigation
- Dashboard
- Members
- Competitions
- Registrations
- Fixtures/results/standings
- Courts/bookings
- Announcements
- Reports
- Permissions

Completion Gate

Club admins should be able to operate competitions without platform-admin intervention for ordinary tasks.

AI Prompt

Design and implement the Next.js Club / Community Admin portal using the shared design system.

Modules:

Dashboard

Members

Players

Leagues

Seasons

Rounds

Fixtures

Results

Standings

Ladders

Tournaments

Events

Registrations

Waitlists

Courts

Court Bookings

Coaches

Announcements

Community

Disputes

Reports

Settings

Define roles such as:

Owner

Admin

Competition Manager

Coach

Content/Community Manager

Read-only role

Include:

Create/edit competition

Registration controls

Fixture generation/manual editing

Result review

Dispute handling

Standings

Announcements

Member management

Court management

Reporting

Design for desktop/laptop first with responsive tablet support.

Phase 14 — Platform Admin Dashboard

Objective: Create platform-level governance, moderation, configuration and analytics capabilities.

Expected Outputs

- Platform admin navigation
- Users
- Organizations
- Courts/coaches
- Competitions
- Content moderation
- Payments/subscriptions
- Roles
- Audit logs
- Platform analytics and health

Completion Gate

Platform operators must be able to govern the ecosystem without exposing unnecessary power to club admins.

AI Prompt

Design and implement the Next.js Platform Admin dashboard.

Modules:

Dashboard

Users

Player Profiles

Organizations

Clubs

Communities

Courts

Coaches

Competitions

News Sources

News Moderation

Learning Content

Reported Content

Disputes

Subscriptions

Payments

Analytics

Configurations

Roles

Permissions

Audit Logs

Platform Health

Apply least-privilege access controls.

Separate:

Operational actions

Moderation actions

Financial actions

Configuration actions

Include auditability for consequential changes.

Avoid generic admin screens: prioritise the tasks platform operators actually need to perform.

Phase 15 — Padel Expansion

Objective: Add Padel without changing the Tennis-first identity or adding global sport switching.

Expected Outputs

- Add Padel flow
- Padel profile
- Padel assessment
- Padel players/courts/competitions
- Padel match and stats support
- Contextual filters

Completion Gate

Padel should feel supported, while Tennis remains the default public and product experience.

AI Prompt

Extend the approved platform to support Padel as a secondary sport.

Do NOT add a global Sport Switcher.

Entry:

Profile

→ My Sports

→ + Add Padel

Create:

Padel Profile

Adaptive Padel Assessment

Padel Rating

Padel Match History

Padel Statistics

Padel Preferences

Padel Goals

Padel Achievements

Assessment may include:

Rally consistency

Forehand

Backhand

Serve

Return

Volley

Overhead

Bandeja

Vibora

Smash

Wall usage

Positioning

Net control

Transition

Partner communication

Tactical awareness

Do not ask beginners advanced questions.

Expose Padel contextually:

Players filter

Court filter

Compete filter

Learn

My Sports

Tennis must remain the default product context.

Phase 16 — Payments, Subscriptions & Monetisation

Objective: Define how the product can monetise without blocking the core play loop unnecessarily.

Expected Outputs

- Pricing model
- Player plans
- Club plans
- Competition fees
- Booking commissions if applicable
- Payments architecture
- Refunds/cancellations
- Entitlements

Completion Gate

Monetisation must be understandable, auditable and aligned with actual user value.

AI Prompt

Define and design the monetisation and payment system.

Evaluate:

Free player tier

Premium player tier

Club/community subscriptions

Competition registration fees

Court booking fees/commissions where applicable

Coach marketplace fees where applicable

Sponsored placements only if appropriate

Define:

Entitlements

Trials

Upgrades/downgrades

Billing history

Receipts

Refunds

Failed payments

Cancellation

Grace periods

Promo codes if justified

For Kenya-first payment options, keep the architecture payment-provider agnostic.

Do not place core safety, privacy or basic result confirmation behind a paywall.

Phase 17 — Analytics, Moderation, Privacy & Notifications

Objective: Add the operational systems needed to understand usage, maintain trust, and keep users informed.

Expected Outputs

- Event taxonomy
- Funnels
- Retention metrics
- Moderation flows
- Privacy settings
- Notification matrix
- Consent/preferences

Completion Gate

Every tracked event and notification should have a clear product reason.

AI Prompt

Design the analytics, moderation, privacy and notification layer.

Analytics:

Define event taxonomy and key funnels:

registration

assessment

player discovery

connections

match scheduling

match completion

league participation

court discovery

learning

practice

retention

Moderation:

Block

Report player

Report message

Report content

Dispute escalation

Admin review

Privacy:

General location only

Profile visibility

Connection controls

Availability visibility

Data export/deletion considerations

Notifications:

Match scheduling

Upcoming match

Result confirmation
League round
Competition registration
Waitlist
Connection request
Messages
Learning reminders
News only when opted in

Create a notification preference matrix and avoid spammy defaults.

Phase 18 — QA, Accessibility, Performance & Security

Objective: Validate that the product is usable, resilient and production-ready across supported platforms.

Expected Outputs

- Functional QA plan
- Accessibility audit
- Performance budgets
- Security controls
- API validation
- Failure/recovery scenarios
- Cross-device testing

Completion Gate

Release candidates should meet defined quality gates rather than subjective visual approval alone.

AI Prompt

Create and execute the pre-release quality plan.

Accessibility:

WCAG 2.2 AA

Contrast

Screen reader labels

Keyboard support for web

Touch target sizes

Dynamic text

Focus states

Reduced motion

Accessible charts/tables

Performance:

Mobile launch time

List rendering

Image loading

Map performance

Web Core Web Vitals

API latency budgets

Security:

Authentication/session handling

Authorization

Rate limiting

Input validation

File upload safety

PII protection

Audit logs

Secrets management

Abuse controls

QA:

Happy paths

Edge cases

Offline/poor-network handling

Duplicate submissions

Result conflicts

Competition closing

Booking-link failures

Push-notification failures

Produce a release-blocker checklist.

Phase 19 — Beta, Launch & Post-Launch Optimisation

Objective: Move from completed product to controlled market release, learn from real behaviour, and prioritise iteration.

Expected Outputs

- Beta plan
- Pilot clubs/communities
- Feedback loops
- Launch metrics
- Support model
- Post-launch backlog
- Experiment plan

Completion Gate

Launch only after core play and competition loops work reliably with real users.

AI Prompt

Create the Beta and Launch plan.

Define:

Closed beta audience

Pilot clubs/communities

Player recruitment

Admin onboarding

Support and escalation process

Bug triage

Feedback collection

Analytics dashboards

Success metrics

Launch readiness criteria

App Store / Play Store checklist

Production monitoring

Post-launch communication

Key outcomes should measure whether the platform helps people:

- find suitable players
- schedule matches
- complete matches
- participate in competitions
- play more frequently
- return to the product

Create a 30/60/90-day post-launch optimisation roadmap.

Do not prioritise vanity metrics over actual play activity.

Suggested Prompt Handoff Pattern

For each new phase, provide the AI tool with the approved outputs from the previous phase plus the relevant phase prompt. Do not resend every document if the tool already has persistent project context. The minimum handoff should include:

- Approved product foundation
- Approved information architecture and user journeys
- Current design-system tokens/components
- Relevant data model and business rules
- The specific phase objective and acceptance criteria

Build Order Recommendation

21. Foundation and requirements
22. IA and journeys
23. Design system
24. Authentication and onboarding
25. Home
26. Player discovery
27. Match scheduling/messaging
28. Results/ratings/stats
29. League competition engine
30. Courts
31. Learning/progress
32. News
33. Club Admin
34. Platform Admin
35. Padel
36. Payments
37. Analytics/moderation
38. Hardening
39. Beta/launch

Final Product Principle

Tennis first. Systems before screens. Journeys before components. Components before implementation. Padel without diluting the Tennis identity.
